Suite 1750, Coliseum Tower
10 Columbus Circle
New York 19, New York

Dear Dr. Berkner:

Thank you for your telegram last week soliciting proposals in Satellite Research. I would not be able in the immediate future to participate directly in experimental work along these lines, but I have been in close consultation with my colleagues, especially Dr. Verner Suomi. I believe that he will have some proposals in the mail to you in which I have a hopeful interest. As the program of space research matures and it becomes possible to think of more explicitly biological experiments, I hope to develop some of my own ideas in these directions.

With many thanks for your consideration,

Yours sincerely,

Joshua Lederberg
Professor of Medical Genetics
